## Large Directories – Overview and Limitations

The Large Directory option is a workaround that allows user to view and dial contacts that exist in a Handset Directory which is too large to be used normally

- If enabled, a new **Directory** softkey is added to the phone
- The Large Directory can be searched, but there is no way to view all contacts in the directory
- It does not replace the phone's Handset Directory
- The Large Directory will not include personal contacts, which only appear locally on the phone.

Speed dials, buddy watches, and other functions that use the Handset Directory will continue to do so even if Large Directory is enabled

If a Handset Directory contains too many entries, Polycom handsets may have trouble displaying the directory. Polycom recommends that no more than **100 contacts** exist in a single handset directory.

While there are usually no issues when surpassing that number, problems often arise as the number of entries reaches **500 contacts** or more.

- While the Large Directory adds a new way to view a phone's assigned Handset Directory, it does not replace the Handset Directory in use by the phone. A user can still access their regular Handset Directory even if their device has the Large Directory enabled.

## Large Directories – Searching Using the Large Directory

- Tap the **Directory** soft key to open the Large Directory
- A Search screen is displayed, from which to search for contacts in the **Directory**
- Enter a name using your phone's keypad and Tap **SEARCH**

- Speed dials, buddy watches, and other functions that use the Handset Directory will continue to do so even if Large Directory is enabled. The Large Directory is simply a separate viewing method for the handset directory.

## Large Directories – Dialing From the Large Directory

- Search results are displayed; tap any contact to view their details
- From this screen, you can view contact details or tap **Dial** to call the contact
- You will be asked to confirm the call; tap **Call** to finish dialing the contact

If the handset's local directory storage is full (i.e. because the Handset Directory is too large), the user will be unable to add a new personal contact or speed dial. The Large Directory setting has no effect on this.

- The Large Directory will not include personal contacts, which only appear locally on the phone.
